

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (Previously presented) A method of processing a data stream with a computer system, the method comprising:
 - receiving a data stream using a browser application;
 - detecting a content type of data in the data stream;
 - determining whether the browser application is invoked within an application environment of an internet service provider to enable a subscriber of the internet service provider to access an online resource;
 - temporarily overriding a default rendering process otherwise associated with the content type detected for the data in the data stream by associating a particular rendering process with the data stream based on the content type of data in the data stream and based on results of the determination of whether the browser application is invoked within the application environment of the internet service provider, wherein:
 - the default rendering process is identified in a registry of a computer, and
 - temporarily overriding the default rendering process identified in the registry of the computer includes changing the registry of the computer such that the default rendering process identified in the registry of the computer and associated with the content type of data in the data stream is replaced with the particular rendering process if the browser application is determined to have been invoked within the application environment of the internet service provider; and
 - routing the data stream to the particular rendering process.

2. (Canceled)

3. (Canceled)

4. (Original) The method of claim 1 wherein the data stream is received in response to a request from the browser application.

5. (Canceled)

6. (Previously presented) The method of claim 1 further comprising routing the data stream to the default rendering process if the browser application is determined to have been invoked outside the application environment of the internet service provider.

7. (Canceled)

8. (Previously presented) The method of claim 1 further comprising:
processing the data stream with the particular rendering process; and
upon completing of the processing, disassociating the particular rendering process with the content type of data in the data stream.

9-18. (Canceled)

19. (Currently amended) A computer program for processing a data stream with a computer system, stored on a computer readable medium, comprising instructions for:
receiving a data stream using a browser application;
detecting a content type of data in the data stream;
determining whether the browser application is invoked within an application environment of an internet service provider to enable a subscriber of the internet service provider to access an online resource;
temporarily overriding a default rendering process otherwise associated with the content type detected for the data in the data stream by associating a particular rendering process with the

data stream based on the content type of data in the data stream and based on results of the determination of whether the browser application has been invoked within the application environment of the internet service provider, wherein:

the default rendering process is identified in a registry of a computer system, and temporarily overriding the default rendering process identified in the registry of the computer system includes changing the registry of the computer system such that the default rendering process identified in the registry of the computer system and associated with the content type of the data in the data stream is replaced with the particular rendering process if the browser application is determined to have been invoked within the application environment of the internet service provider; and routing the data stream to the particular rendering process.

20. (Canceled)

21. (Canceled)

22. (Original) The computer program of claim 19 wherein the data stream is received in response to a request from the browser application.

23. (Canceled)

24. (Previously presented) The computer program of claim 19 further comprising routing the data stream to the default rendering process if the browser application is determined to have been invoked outside the application environment of the internet service provider.

25. (Canceled)

26. (Previously presented) The computer program of claim 19 further comprising:

processing the data stream with the particular rendering process; and
upon completing of the processing, disassociating the particular rendering process from
the content type of data in the data stream.

27-36. (Canceled)

37. (Previously presented) The method of claim 1 wherein invoking the browser
comprises enabling access to browser functionality as an ActiveX component in an application
provided by the internet service provider.

38. (Canceled)

39. (Previously presented) The computer program of claim 19 wherein invoking the
browser comprises enabling access to browser functionality as an ActiveX component in an
application provided by the internet service provider.

40. (Canceled)

41. (Previously presented) The method of claim 1 wherein temporarily overriding the
default rendering process includes supplementing the registry of the computer such that the
default rendering process identified in the registry of the computer and associated with the
content type of data in the data stream is replaced with the particular rendering process if the
browser application is determined to have been invoked within the application environment of
the internet service provider.

42. (Previously presented) The method of claim 1 wherein temporarily overriding the
default rendering process includes changing the registry of the computer in response to the data
stream received by the browser application that is running on the computer.

43. (Previously presented) The method of claim 1 wherein the particular rendering process includes a content rendering process for processing the content of the data stream.

44-46. (Canceled)

47. (Previously presented) The computer program of claim 19 wherein temporarily overriding the default rendering process includes supplementing the registry of the computer system such that the default rendering process identified in the registry of the computer system and associated with the content type of data in the data stream is replaced with the particular rendering process if the browser application is determined to have been invoked within the application environment of the internet service provider.

48. (Previously presented) The computer program of claim 19 wherein temporarily overriding the default rendering process includes changing the registry of the computer system in response to the data stream received by the browser application that is running on the computer system.

49. (Previously presented) The computer program of claim 19 wherein the particular rendering process includes a content rendering process for processing the content of the data stream.

50-52. (Canceled)

53. (New) The computer program of claim 19 further comprising instructions for:
processing the data stream with the particular rendering process; and
upon completing of the processing, disassociating the particular rendering process with the content type of data in the data stream.
